

Data Model-1:ERDDiagram1

All available Categories like Application, Infrastructure, Security, etc are stored in a central Metadata database. Each Category is L0 which is at the root level. L1, L2, L3 are the children in the hierarchy

Role can be Consultant, admin etc.

Application, Infrastructure, Security, etc. are some L0 root level categories. Please refer Note.

Engagement Instance is the schema created specific to that Customer

Note: There will be two options given in the Tool to the consultant based on his initial assessment. A) Either to pull all central metadata of a specific root level category B) Pick and choose the respective parameters from the central metadata for that specific root level category.
